

RADIUS REPORT FOR 1, 3, and 5 miles around Lot 3 Rollins Rd., Round Lake Beach, IL 60073

PREPARED FOR: Robert Frank

MAP

1, 3, and 5 miles around Lot 3 W. Rollins Rd., Round Lake Beach, IL 60073

CITY
Round Lake Beach village, Illinois

COUNTY
Lake County, Illinois

How many people live here?

1 MI	3 MI	5 MI
17K	73K	135K
CITY: 27K		COUNTY: 713K

How much money do they make?

1 MI	3 MI	5 MI
\$74K	\$94K	\$97K
CITY: \$83K		COUNTY: \$105K
<i>median household income</i>		

How old are they?

1 MI	3 MI	5 MI
32	35	37
CITY: 33		COUNTY: 39
<i>median age in years</i>		

DEMOGRAPHICS

Population

POPULATION PROJECTIONS

State and county population projections.

	2000	2010	2020	2030	% Population Change			% Population Change 2020-2030
					2000-2010	2010-2020	2020-2030	
Illinois	12,419,293	12,830,632	12,812,508	12,790,000				0%
Lake County	644,356	703,462	714,342	795,649				11%

Source: Illinois Department of Public Health, Office of Policy, Planning and Statistics, Population Projections for Illinois Counties: 2010 to 2030. April 2021. U.S. Census Bureau, Decennial Censuses 2000, 2010, and 2020.

Methodology

RADIUS ESTIMATES

First, we subtract the 2022 US Census Bureau's water areas from the 2022 block groups. Then we calculate the project's radiuses, the block groups minus water areas that intersect the radiuses, and the percent of each block group's area that's in the radiuses (overlap). Next, the overlap percent is multiplied by the Census demographics for each block group. Finally, we sum the overlap times the demographics for all block groups that intersect a radius to produce the demographic estimate for the radius.

The benefits of this methodology are that it allows for:

1. the use of the **most current data** for small area geographies from the US Census Bureau;
2. the estimation of demographics for radius distances using dissimilar shaped Census block groups;
3. **data comparability** (because estimates for small radiuses and large radiuses use the same methodology, geographies and datasets); and
4. improved estimates along coastlines and large water bodies by removing water areas.

This methodology assumes that the **population is equally distributed** throughout a block group. This assumption can result in unlikely estimates for small radiuses (i.e. 1 mile) in rural areas with low population densities and thus, large geographic area block groups.

MEDIAN ESTIMATES

To estimate median values, we use a simple method explained in the book "Beginning Statistics: An Introduction for Social Scientists" by Diamond I and Jefferies J. Here's how it works:

1. We pull grouped data for your area of interest and order the groups from smallest to largest. This helps us see which group the middle value, or median, is in.
2. We figure out exactly where the middle value sits within its group. We look at how far into the group it is, as a percentage, starting from the bottom end.
3. Then, we check how big the gap is between the smallest and largest numbers in that group.
4. We use the percentage to find a part of that gap. This percentage tells us how much to add to the smallest number in the group to get the median.
